

Contract Protein Services

A complete line of protein services.

Cloning, expression, protein production, antibody generation, antibody purification and more

Aldevron offers a complete line of protein services, including gene synthesis, cloning, expression and purification of recombinant proteins and antibodies. We routinely produce proteins for use in diagnostic kits, in vivo studies, x-ray crystallography, and NMR spectroscopy. Aldevron's scientists can provide solutions for even the most difficult projects, including the purification of untagged and low-expressing proteins.

- Gene synthesis
- Cloning and expression
- Purification of recombinant proteins, enzymes and antibodies
- Endotoxin removal from protein solutions
- Cost-effective purification of affinity tagged proteins, milligram to gram scale
