

Aldevron's neoGMP[®] plasmid DNA production service is designed to support your personalized medicine program.

neoGMP[®] Service

neoGMP[®] produces a unique plasmid DNA for each patient at a small scale, compared to a single, large-scale lot for many patients. The service supports the requirements for rapid production from a patient-specific sequence while maintaining the high quality you expect from Aldevron.

Features of neoGMP[®]

- Rapid turnaround
- Single-use, product-dedicated materials and equipment
- Options for parallel processing
- Quality oversight of key processes and parameters
- Segregated manufacturing

Aldevron Advantage

- 22+ year track record in DNA manufacturing
- Regulatory experience
- Process optimization expertise
- Investments in manufacturing process development
